The purpose of this amendment is to answer a question posed by a potential offeror. The question and answer is as follows:

1. Regarding the temperature ranges listed for both of the amplifiers, are these survivable temperature ranges, or does the amplifier need to meet the electrical specifications over that temperature range?

   The amplifiers do not have to meet the performance goals over the specified temperature range. It is desirable to have a minimum degradation in performance as the temperature varies from room temperature to the temperature extremes. However, it is only required that the packaged MMICs be demonstrated to operate over the specified –20C to + 40C range. Offerors should address temperature performance in their proposal and plan to collect data on the performance at the temperature extremes (-20C and +40C).
