The purpose of this amendment is to answer questions from a potential offeror.

1. Will NRL supply MLI for the Main Reflector for thermal vac testing?

Yes, NRL will provide the MLI for TVAC testing.

2. There appears to be a conflict in the language regarding the Mass requirement (p. 3-10 of specifications) and the ability of the contractor to meet the requirement. We would like to get some clarification regarding the ability to meet the requirement and possible impact to the Frequency Requirement for the Main Reflector (p. 3-23 of specifications).

There is no NRL FEM of the MIS Reflectors as there is not yet a design of the reflectors. It is the vendor's responsibility to design the reflectors and generate FEM for them. STEP files for the envelopes of both reflectors will be sent to offerors having already requested the specifications under separate email; however, the vendor is required to build to the ICD, not the solid model envelope. The ICD represents the contractual obligation while the STEP files are only an informal tool.

If the offeror feels they cannot achieve all requirements within the not-to-exceed (NTE) mass specified, the offeror may propose an alternate NTE mass for consideration. This action will not necessarily hinder the offeror's proposal, as NRL is seeking the best overall value to the Government within program constraints. However, there will be no change to the MR or CSR frequency requirement as the modal behavior of each reflector is closely coupled to the modal behavior of each reflector's support structure, and therefore the overall modal behavior of the MIS instrument.

3. All other terms and conditions remain unchanged.
