The purpose of this amendment is to answer questions from potential offerors.

1. Several questions have been posed in regards to the 30 page limit for the technical/management proposals. The only items that are not to be included in this page total are resumes, the compliance matrix, title pages, and tables of contents. Proposed schedules are to be included in the 30 pages, but may be printed on 11x17 paper, if desired.

2. The following question was asked, and a clarifying statement has been provided:

*Question: We request the clarification the following requirement in Specification paragraph 4.6.6.2 [S-MI004-1856]*

*"... shall undergo random vibration testing in a way that is representative of the simultaneity of the vibration and acoustic environment."*

Answer: The intent of this statement is to clarify the random vibration test requirement (S-MI004-1656). Specifically, the intent is to clarify what NRL intends as the verification method of the random vibration design environment requirement (S-MI004-0045), which states that the "Cold Sky Reflector shall be designed to withstand the random vibration environment...applied simultaneously with the acoustic environment".

All Cold Sky Reflectors shall be subjected to the loads that result from the simultaneity of the CSR vibration and MIS acoustic environments.

*Note: During launch the CSR will experience the CSR random vibration environment simultaneously with the MIS acoustic environment. While the vendor isn't required specifically to subject the CSR to the acoustic environment simultaneously with the random vibration environment, the vendor must develop a test plan that subjects the CSR to the loads expected during these environments. For example, one approach may be to develop an additional quasi-static sine burst test that produces the loads experienced during launch that aren't produced during either the individual acoustic or random vibration tests. NRL must concur with the test approach that the vendor proposes.*

3. All other terms and conditions remain unchanged.
