

**NRL BAA Announcement
#56-09-04**

IMAGING SEEKER ADVANCED COUNTERMEASURES

The Applied Optics Branch of the Naval Research Laboratory (NRL) is interested in receiving proposals that support research into countermeasure technology and countermeasure techniques against advanced anti-air and anti-ship imaging infrared seekers. NRL is interested in organizations with a strong knowledge of imaging tracker design and processing to conduct the countermeasure research. Offerors must also have background in the use of modeling and simulation tools for imaging seekers to conduct countermeasure research.

NRL is not interested in concepts which have already been proven. Results of the research should be directed toward demonstrating generic countermeasure techniques against classes of imaging seeker track processors and designs and their robustness rather than focusing on a specific problem or design.

Address White Papers (WP) to Code 5660.2, or [e-mail](#), telephone (202) 404-4246. Allow one month before requesting confirmation of receipt of WP, if confirmation is desired. Substantive contact should not take place prior to evaluation of a WP by NRL. If necessary, NRL will initiate substantive contact.
