Description

The synopsis is amended to answer questions from a prospective offeror. The questions are as follows:

1. Does the heating and cooling capacity per paragraph 3 (Basic Unit 1) of Attachment 1 need to meet the entire range of operating temperatures plus solar load specified in paragraph 21?

Paragraph 3 of the specification refers to the heating and cooling requirements, while Paragraph 21 refers to the insulation requirements. The two requirements are unrelated, and should be read as separate requirements for A/C / heating and insulation respectively. The heating and cooling capacity

required remains as stated in Paragraph 3.

2. In paragraph 3, what is the significance of the stipulated NOMINAL capacity?

The term "nominal" refers to the manufacturers rating of minimum output requirements for AC/ heating and can be interpreted to mean an approximate value.

3. Is the full 2 tons of heating and 4 tons of cooling expected at the specified extreme temperatures?

As stated in the answer to Question 1 above, the two specifications are unrelated, and should be read separately.
