The Government intends to award a contract resulting from this solicitation to that responsible offeror whose offer conforming to the solicitation will be the most advantageous to the Government, price and other factors considered. The following factors shall be used to evaluate the offers:

- 1) Proposals will be evaluated on the extent to which the proposed instrument is compatible with the existing VG V80H MBE wafer mounts, wafer transfer mechanisms, effusion cell designs, and control electronics.
- 2) Proposals will be evaluated on the extent to which the proposed instrument is flexible enough to permit the study of a wide variety of materials over its operational life. This evaluation factor will also include an evaluation of the number of effusion cell ports, shutters, and measurement and characterization ports proposed. Also to be evaluated is whether an additional high-conductance UHV pumping port is provided.
- 3) Proposals will be evaluated on the quality of the components supplied, the quality of the system design, and the extent to which the capabilities proposed are demonstrated with documentation provided with the proposal.
- 4) Proposals will be evaluated on the extent to which the proposed instrument is as compact as possible while meeting the required specifications and permitting future expansion.
- 5) Proposals will be evaluated on the price proposed.
- 6) Proposals will be evaluated on the extent to which the offeror has demonstrated good performance in the past.

The factors above are listed in descending order of importance. Factors 3, 4 and 5 are equal in value. All evaluation factors other than price, when combined, are significantly more important than price.
